

Recipients: Veterinarians from the swine sector
Sender: Virology laboratory
Date : 2019-03-20
Object : **PRRSV-ELISA kit change for oral fluids**

Dear customers,

We would like to inform you that the Virology laboratory is currently changing its ELISA kit used for the detection of PRRSV antibodies in oral fluids which will, among other things, make it possible to release results more quickly. The reported specificity of this new kit is 98.7% and the sensitivity is 100%. Our comparison assays confirm these values.

You may notice, as soon as tomorrow, a change in the ratio values on the report. These are interpreted in terms of a positive or negative result as defined in the legend. Note that results from animals fed with dried swine plasma supplements should be interpreted with caution as some plasma may contain PRRSV antibodies that may influence the test.

The change will not affect the price that will be maintained at the cost of 10.25\$ per sample.

If you have any questions or comments, do not hesitate to contact us.
